# Introduction & Contents

---

This manual is intended to be used as a reference to the CE-7000, TK-7000/7500, TK-6000/6500, CE-6000/6100, CE-T300 and TK-T500 system. It provides details to allow whole understanding of the system capabilities, its operation, and how it can be used to solve many problems within the retail outlet.

This manual consists of the following chapters:

1. Hardware configuration (for installation)  
This chapter describes the hardware of these models and their network systems.
2. IPL (initial program loading)  
This chapter describes how to download the application program to the terminal.
3. Initialization  
This chapter describes how to set up the peripheral devices and the terminals.
4. Programming  
This chapter explains actual programming procedure and functions.
5. Manager mode
6. X/Z report
7. Consolidation
8. Application system
9. Tips
10. Appendix:

## Printing history

Manual version		Software version
Version 0.1.0 : February 2000	Tentative edition	Version -.-.-
Version 1.0.0 : March 2000		Version 1.0
Version 1.0.1 : May 2000	TK-T500 (CE-T300) added	Version 1.0
Version 1.1.0 : June 2000	Programmable error/guidance message	Version 1.1
Version 1.2.0 : July 2000	Australian GST	Version 1.2
Version 1.3 : August 2000	Improvement of efficiency	Version 1.3
Version 1.4 : June 2001	Modify Euro setup	Version 1.4
Version 1.5 : August 2001	Specification enhancement	Version 1.5

## Revised points

Version 1.01 :	• Add CE-T300 and TK-T500 features
Version 1.1.0 :	• Error message file and guidance message files are allocatable and programmable. If these files are not allocated, the default messages are used.
Version 1.2.0 :	• Australian GST • Add an option to print consecutive number range of the day on daily fixed total report. • Vacant record search (arrangement program)
Version 1.3 :	• High speed slip printing option is available. • Record designation is not necessary for batch maintenance PLU programming. • Single item status is not effective after <NORMAL RECEIPT> registration.
Version 1.4 :	• Modify the Euro setup procedure. • Increase the maximum number of the scanning PLU items up to 20,000. • Increase the maximum number of the records of “character recall” and “scheduler” file.
Version 1.5 :	• Character edit mode (override the programmed character) • Inline consolidation of PLU by group • Graphic logo printing on external printer • Default menu sheet No. after signing on • Operation restriction of sheet holder by clerk • Operation restriction of issuing individual key reset report • Double batch report • Memory affection of mix & match transaction (net totaling) • 13-digit non PLU weight type barcode • Job command for “default menu sheet No.” and “Operation restriction of sheet holder.”

## IPL (Initial program loading)

IPL should be made before initializing when the application program has been modified.

### Memory map of the terminal

The application programs are downloaded from PC (via COM port)/other terminal (via inline or COM port)/Memory cassette to the internal flash memory.

### System configuration and procedure

#### Via COM port

#### Operation

1. Turn OFF the register.
2. While holding down <JOURNAL FEED>, turn the mode switch to PGM.
3. Release <JOURNAL FEED>.
4. Enter "44449999" and press <SUBTOTAL>.
5. Enter "0" (communication speed: 38400bps) and press <SUBTOTAL>.
6. Start the IPL program of the PC.

# IPL (Initial Program Loading)

## Via inline

### Operation (satellite)

1. Turn OFF the all of the satellite register(s).
2. While holding down <JOURNAL FEED>, turn the mode switch to PGM.
3. Release <JOURNAL FEED>.
4. Enter “44449999” and press <SUBTOTAL>.
5. Enter “D<sub>4</sub>D<sub>3</sub>D<sub>2</sub>D<sub>1</sub>” and press <SUBTOTAL>.  
D<sub>4</sub>D<sub>3</sub>: 2-digit of machine ID for IPL  
D<sub>2</sub>: Always “1”.  
D<sub>1</sub>: 1-digit of baud rate designation, “0” means 156k bps, “1” means 312k bps.
6. Follow step 2 ~ 5 for all satellites to be IPL.

### Operation (master)

1. Turn to PGM mode.
2. Enter “7” and press <SUBTOTAL>.
3. Enter “150” and press <SUBTOTAL>.
4. Enter “49” and press <CASH>.  
(In case of quitting, press <SUBTOTAL> instead of <CASH>.)

## Via memory cassette (to send the IPL data to memory cassette)

### Operation

1. Turn OFF the register.
2. Open the memory cassette door/prINTER subcover (CE-T300, TK-T500) and insert the memory cassette securely.  
(Please check that the memory cassette is vacant. Refer to the “System utility chapter (P7)”.)
3. Turn to PGM mode.
4. Enter “7” and press <SUBTOTAL>.
5. Enter “170” and press <SUBTOTAL>.
6. Enter “49” and press <CASH>.  
(In case of quitting, press <SUBTOTAL> instead of <CASH>.)
7. Turn OFF the register and pull out the memory cassette.  
(For avoiding erasing the IPL data, please turn on the write protect switch of the memory cassette.)

## Via memory cassette (to send the IPL data to register)

### Operation

1. Turn OFF the register.
2. Open the memory cassette door/printer subcover (CE-T300, TK-T500) and insert the memory cassette securely.
3. While holding down <JOURNAL FEED>, turn the mode switch to PGM.
3. Release <JOURNAL FEED>.
4. Enter "44449999" and press <SUBTOTAL>.
5. Enter "20" and press <SUBTOTAL>.

## To send IPL data to ECR via COM1 port

### Operation (register)

1. Turn to PGM mode.
  2. Enter "7" and press <SUBTOTAL>.
  3. Enter "180" and press <SUBTOTAL>.
  4. Enter "49" and press <CASH>.
- (In case of quitting, press <SUBTOTAL> instead of <CASH>.)  
 (Communication speed is fixed; 38400 bps.)

# Initialization

## Machine initialization procedure

For CE-7000, TK-7000/7500, TK-6000/6500, TK-T500

Note: If your register has the clerk lock, be sure to pull out the clerk key.

1. Plug the power cord into an AC outlet.

2. Set the mode switch to OFF position.

3. While holding down **JOURNAL FEED**, set the mode switch to PGM.

4. Release **JOURNAL FEED**.

You should see "0000000000" on the display.

If 10 zeros are not shown or another character are shown, immediately set the mode switch to OFF and restart from the beginning of this procedure.

5. Enter 11-digit program code from the worksheet.

6. Press **SUB TOTAL** to register the program code.

(Wait until beep twice.)

7. In case of installing inline system, enter 3-digit program code from the worksheet.

(For TK-6000/6500 without inline option, do NOT enter any value.)

8. Press **SUB TOTAL** to register the program code.

$D_{11}D_{10}D_9D_8 \sim D_3D_2D_1$  **SUB TOTAL**  
(refer to Initialize 1)

$D_3D_2D_1$  **SUB TOTAL**  
(refer to Initialize 2)

After completion of initialization and program loading, initialization receipt is issued.

Please turn on and initialize the register in order, if your registers are connected with inline. The ID number of registers are defined automatically. (Do NOT turn off the register(s) until all register has been initialized.)

# Initialization

## Only for CE-6000/6100, CE-T300

Note: If your register has the clerk lock, be sure to pull out the clerk key.

1. Plug the power cord into an AC outlet.

2. Set the mode switch to OFF position.

3. While holding down **JOURNAL FEED**, set the mode switch to PGM.

4. Release **JOURNAL FEED**.

You should see "0000000000" on the display.

If 10 zeros are not shown or another character are shown, immediately set the mode switch to OFF and restart from the beginning of this procedure.

5. Enter 11-digit program code from the worksheet.

$D_{11} D_{10} D_9 D_8 \sim D_3 D_2 D_1$  (refer to Initialize 1)

6. Press **SUB TOTAL** to register the program code.

After completion of initialization and program loading, initialization receipt is issued.

### Note:

Please check the receipt after initialization operation (machine initialization, flag clear operation and init2) that the machine number is printed properly.

If error codes are printed on it, check the hardware and retry the operation.

(For TK-6000/6500 without I/O-PB-14, the error “0004-98 2000” is always printed.)

## Flag clear operation

1. Plug the power cord into an AC outlet.
2. Set the mode switch to OFF position.
3. While holding down **RECEIPT FEED**, set the mode switch to PGM.
4. Release **RECEIPT FEED**.  
You should see “FFFFFFFFF” on the display.  
If 10 Fs are not shown or another character are shown,  
immediately set the mode switch to OFF and restart from  
the beginning of this procedure.
5. Press **SUB TOTAL** to complete.

After completion of flag clear, receipt is issued.

# Initialization

## Init 2 operation

1. Plug the power cord into an AC outlet.
2. Set the mode switch to OFF position.
3. While holding down **RECEIPT FEED**, set the mode switch to PGM.
4. Release **RECEIPT FEED**.  
You should see “FFFFFFFFF” on the display.  
If 10 Fs are not shown or another character are shown,  
immediately set the mode switch to OFF and restart from  
the beginning of this procedure.
5. Enter “8888888888” and press **SUB TOTAL** to complete.

After completion, receipt is issued.

## Entering diag mode

1. Plug the power cord into an AC outlet.
2. Set the mode switch to OFF position.
3. While holding down **RECEIPT FEED**, set the mode switch to PGM.
4. Release **RECEIPT FEED**.
5. Enter “99990000” and press **SUB TOTAL** to enter the diagnosis.

## Password

During initialize operation, you can program the password for PGM 3 ~ 7. If it is set, every time you enter PGM 3 ~ 7 mode, you must input this password by the following procedure.

1. Press <#-1> (normally **CA/AMT/TEND**).
2. Enter password.
3. Press <#-2> (normally **SUB TOTAL**).

Otherwise, you can do nothing in the PGM 3 ~ 7 mode.

# Programming (General explanation)

## Program sub mode (P1 thru P7 mode)

Program mode contains seven sub modes listed below. When you change the mode switch to PGM mode, the register is always in the PGM 1 mode. In case of using other mode, enter the sub mode number (2 ~ 7) and press <SUBTOTAL>.

- PGM1: unit price, rate, date, time, scanning PLU unit price maintenance
- PGM2: descriptor, name, message
- PGM3: machine feature (general function, clerk, etc.), key feature (department, transaction), scanning PLU maintenance
- PGM4: key allocation
- PGM5: file allocation
- PGM6: program reading
- PGM7: auto-program, system utility

## Entering the program sub mode

### Procedure (for PGM 1, 2 mode)

1. Enter password for PGM 1, 2 mode. If the register has no password for the PGM1 and 2 mode, you need not to enter it.
2. Press <SUBTOTAL>. An error occurs if you try to enter the PGM1 or 2 mode without inputting a password (when one is programmed), or if the password you input does not match the one programmed for the register.

To avoid repetition, the above operation is abbreviated to the following for all of the other procedure in this manual. This password is defined by the address code 02 of the general function program.

### Procedure (for PGM 3 ~ 7 mode)

1. Enter password for PGM 3 ~ 7 mode. If the register has no password for the PGM 3 ~ 7 mode, you need not to enter it.
2. Press <SUBTOTAL>. An error occurs if you try to enter the PGM 3 ~ 7 mode without inputting a password (when one is programmed), or if the password you input does not match the one programmed for the register.

To avoid repetition, the above operation is abbreviated to the following for all of the other procedure in this manual. This password is defined during initialization operation.

## Tax table programming

### Programming procedure

#### \*1 Rounding/Tax system code

##### Rounding code specification

D <sub>4</sub>	D <sub>3</sub>	Rounding
5	0	Rounding off two decimal places
9	0	Rounding up to two decimal places
0	0	Cut off two decimal places

##### Tax system code specification

D <sub>2</sub>	D <sub>1</sub>	Rounding
4	--	Singapore rounding
--	1	Tax table only
--	2	U.S. tax table with tax rate or add-on tax only
--	3	Add-in tax rate
--	4	Tax-on-tax (Canada, Singapore)

#### Canadian tax system

For both add-on and add-in tax systems.

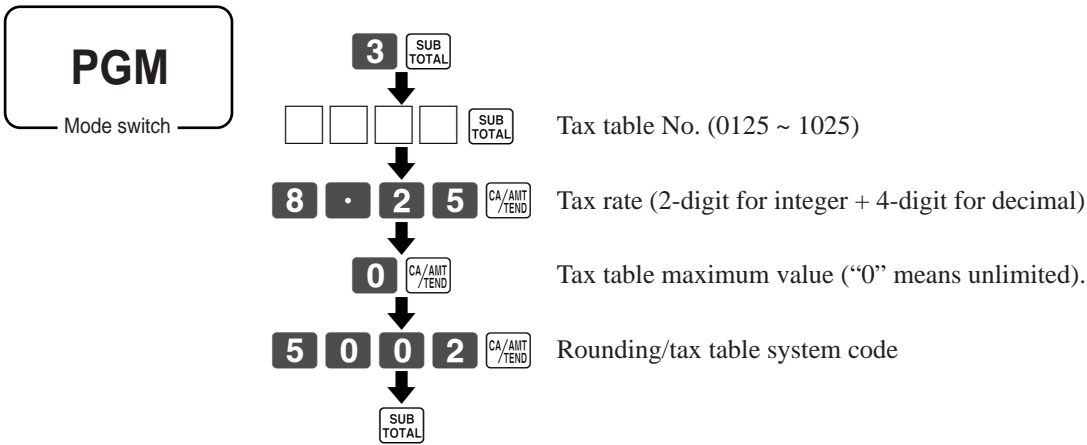

To program Tax-on-tax system, you must use the tax address "0225", "0325" or "0425."

To program Donuts tax system, you must use the tax address "0125" or "0225."

**Example 1:**  
**Add-on rate tax**

Tax rate (2-digit for integer + 4-digit for decimal) .....	8.25%
Tax table maximum value ("0" means unlimited). .....	0 (no limitation)
Rounding/tax table system code .....	5002 (Round off)
Sum of a cyclic pattern .....	0
Number of values in each cyclic pattern .....	0
Number of values in each non-cyclic pattern .....	0
Actual value of difference of the non-cyclic and cyclic values .....	0

} No need to enter.

 Tax table maximum value ("0" means unlimited). ..... 0 (Table only)  
 Rounding/tax table system code ..... 01 (Table only)  
 Sum of a cyclic pattern ..... 50 (17+17+16)  
 Number of values in each cyclic pattern ..... 3  
 Number of values in each non-cyclic pattern ..... 24 (10+14)  
 Actual value of difference of the non-cyclic and cyclic values ..... 10, 14, 17, 17, 16

Tax table No. (0125 ~ 0325)

Tax rate (2-digit for integer + 4-digit for decimal)

Tax table maximum value ("0" means unlimited).

Rounding/tax table system code

Sum of a cyclic pattern

Number of values in each cyclic pattern

Sum of values in each non-cyclic pattern

Actual value of difference of the non-cyclic and cyclic values.

You must enter these values in 4-digit block. If the last block comes out to be only two digits, add two zeros.

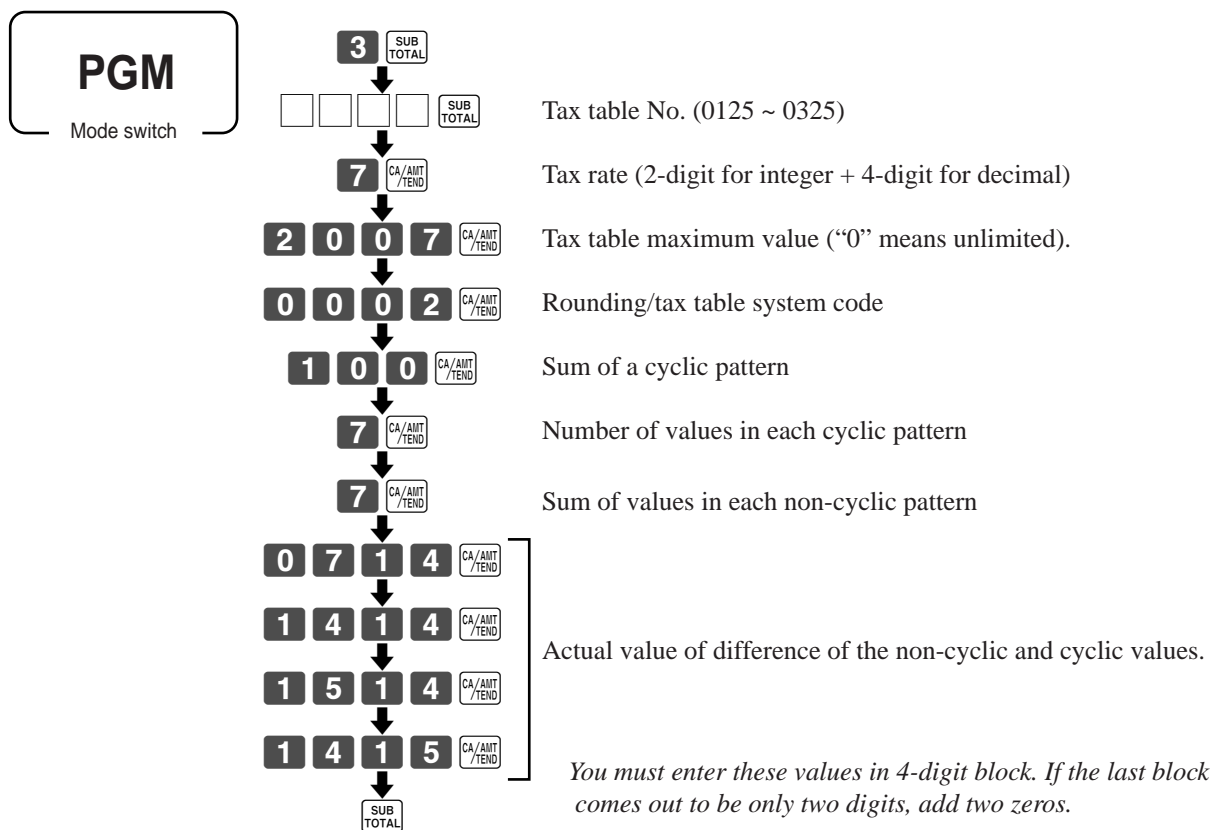

### Example 3:

#### U.S. tax table with rate setting

ee: Input the end record number of clerk.

## Bottle link table programming

### Programming procedure

## Terminal connection table programming

### Programming procedure

**Note:** Please follow step 1 and 2, after this program.

1. Send this (terminal connection table) file to all terminals.
2. Perform flag clear operation of all terminals.

### Program data

Description	Choice	Program code
Terminal condition: Active = 1, Inactive * = 0	Significant number	<input type="text"/> D <sub>4</sub>
Always "0"		<input type="text"/> <input type="text"/> D <sub>3</sub> D <sub>2</sub>
Inline group No. (0 ~ 9) ("0" means no group link.)	Significant number	<input type="text"/> D <sub>1</sub>

\* Inactive: No data is sent/received from/to other terminal(s).

## By character keyboard

### CE-7000 character keyboard

### TK-7000, TK-T500 character keyboard

②, ③: TK-T500 for Ex-U.S. or Ex-Canada.

#### ① Shift key

TK-series:

Pressing this key shifts the character from the uppercase letter to lower case letter and vice versa.

CE-series:

Pressing this key shifts the character through the uppercase letter, lower case letter and numerics.

#### ② Left cursor key

Move the cursor to the left one by one to modify characters.

#### ③ Right cursor key

Move the cursor to the right one by one to modify characters.

#### ④ Double size letter key

Specifies that the next character you enter a double size character.

You must press this key before each double size character.

#### ⑤ Space key

Set a space by depression.

#### ⑥ CAP key

Pressing this key shifts the character to the uppercase letter.

#### ⑦ Alphabet keys

Use those keys to enter characters.

#### ⑧ Numeric keys

Use those keys to enter program codes, memory number and character codes.

#### ⑨ Character fixed key

Press this key to fix all entered characters before you assign them to function keys, PLUs, department keys and so on.

#### ⑩ Backspace/Character code fixed key

Registers one character with code (2 or 3 digit).

Clears the last entered character, much like a back space key.

#### ⑪ Program end key

Terminates the character programming.

#### ⑫ Character enter key

Registers the programmed characters.

#### ⑬ Insert/Override key

Press this key to change the status "Insert" between the original characters or "Override" the original characters.

# Auto-program & system utilities (Program 7)

## Auto-programming

Using the auto-program function makes it possible to save and load the terminal program files. Methods available for saving the terminal program are as follows:

- 1) Saving another terminal connected through inline.
- 2) Saving onto a personal computer connected through online.
- 3) Saving onto a memory cassette.
- 4) Saving the internal flash memory.

To ensure quick recovery from a corrupted file resulting from user error or system failure, it is recommended that you maintain backup copies of current terminal programs on a file basis.

Terminal program files can be loaded using procedures opposite to those used for saving.

### Note

Data except for program data and totalizer/counters, such as subtotal amount, item counter, and work area, cannot be saved by the auto-programming function.

## Auto-programming functions

The terminal is capable of saving and loading terminal program files. The terminal has the following transfer functions:

- 1) Copy complete terminal files (send/receive: activation by source terminal) :Command code 900  
This function copies complete terminal files (except system work files) with counter and totalizers. When a file is not reserved on the target terminal, the file is created automatically. This function is used for backing up a terminal.  
Note: This function does not work through inline.
- 2) Copy all terminal files (send/receive: activation by source terminal): Command code 090 (or 990)  
This function copies all terminal files (except system work files and terminal ID No.) with counter and totalizers. When a file is not reserved on the target terminal, the file is created automatically. This function is used for copying a terminal data to other terminal.
- 3) Copy all terminal program files (send/receive: activation by source terminal): Command code 092  
This function copies all terminal files (except system work files, terminal ID No., I/O parameter file, and consecutive No.) without counters and totalizers. When a file is not reserved on the target terminal, the processing file is skipped.
- 4) Copy all terminal program files with file allocation (send/receive: activation by source terminal): Command code 992  
This function copies all terminal files (except system work files, terminal ID No., I/O parameter file, and consecutive No.) without counters and totalizers. When a file is not reserved on the target terminal, the file is created automatically.
- 5) Copy individual terminal program files (send/receive: activation by source terminal) Command code 0xx (xx: file No.)  
This function copies the specific terminal program file (except system work files) without counters and totalizers. When the specific file is not reserved on the target terminal, it is skipped.
- 6) Copy individual terminal program files with file creation (send/receive: activation by source terminal)  
Command code 9xx (xx: file No.)  
This function copies the specific terminal program file (except system work files) without counters and totalizers. When the specific file is not reserved on the target terminal, it is allocated automatically.

## Auto-programming operation

### To other terminal(s) through inline (Individual or all terminals)

Note: Before executing this command, terminal connection table program is necessary.

### To other terminal(s) through inline (group terminals)

Note: Before executing this command, terminal connection table program is necessary.

### To other terminal through COM1 port

### To its internal flash memory

Note: You cannot over the same file.

If there is no enough room for auto-program, format its internal flash memory.

### To memory cassette

Note: You cannot over the same file.

If there is no enough room for auto-program or if you use the memory cassette for the first time, format the memory cassette.

# Manager operation

This section describes modes and operations that are generally used by management only. Besides user programming procedure, it also describes how to perform clerk assignments for clerk interrupt function and set stock quantities.

## Manager control mode (X1 mode)

Manager control consists of the six operations listed below. Access to these operations can be restricted by password that makes it impossible to perform operations unless the correct password is input.

- Drawer assignments for each clerk (when optional multi-drawer system is used)
- Stock quantity maintenance
- Clerk assignment for clerk interrupt function
- Clerk number to clerk number key
- Programming for the Euro
- Program 1 programming (programming unit prices for department keys, PLUs; programming unit prices, rates, times, dates for function keys)

## Entering the manager control mode

### Procedure

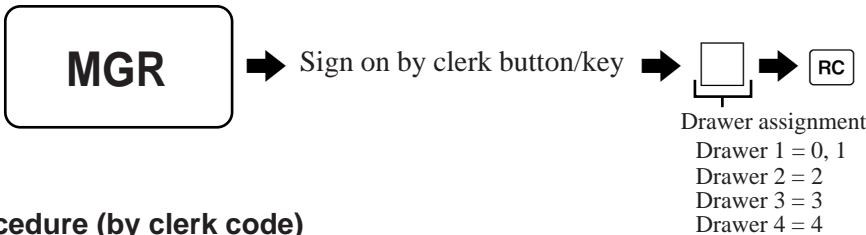

1. If the register has no password for the manager mode, you need not to enter it.
2. Press the clerk number key if you want the password you input not to appear on the display.
3. An error occurs if you try to enter the manager control mode without inputting a password (when one is programmed), or if the password you input does not match the one programmed for the register.

To avoid repetition, the above operation is abbreviated to the following for all of the other procedure in this section.

## Assign drawers for each clerk

### Procedure (by clerk button/key)

### Procedure (by clerk code)

### Note:

1. Each clerk can be assigned a drawer when optional multi-drawer system is being used.
2. Drawer number 0 ~ 2 (TK-6000/6500, CE-6000/6100, CE-T300), drawer number 0 ~ 4 (TK-7000/7500, CE-7000, TK-T500)
3. Input a 4-digit clerk number (0001 ~ 9999) that identifies the clerk you want to assign the drawer to.

Stock quantity maintenance (PLU/flat PLU only)

(for CE-7000, TK-7000/7500, TK-T500 only)

You can make changes in actual stock quantities for PLU using the procedures described in this section.

Programming for the Euro

This procedure is used for defining main/sub currency, currency exchange rate for the Euro, and drawer number for sub currency at the same time. Please follow the guidance receipts issued in each time during this procedure.

General procedure

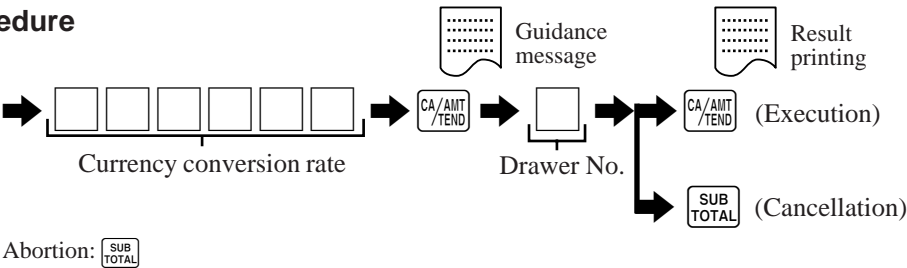

**Note:** After this operation, the Init 2 (Memory all clear except the program area) is automatically performed.

Data (Currency definition type)

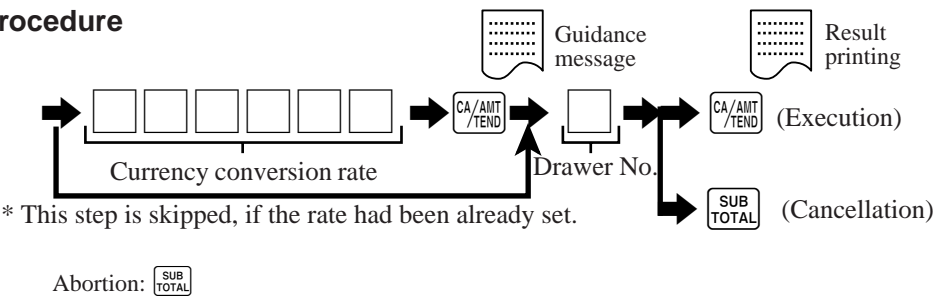

Description	Choice	Program code
Currency definition type * :		
Main = local, sub = Euro, change = local ..... 1	Significant number	<div><div></div></div> <div>D<sub>1</sub></div>
Main = local, sub = Euro, change = Euro ..... 2		
Main = Euro, sub = local, change = Euro ..... 3		
Euro only (No sub currency) ..... 4		

\* Once you have chosen one of these numbers, do NOT select the smaller number of the type.

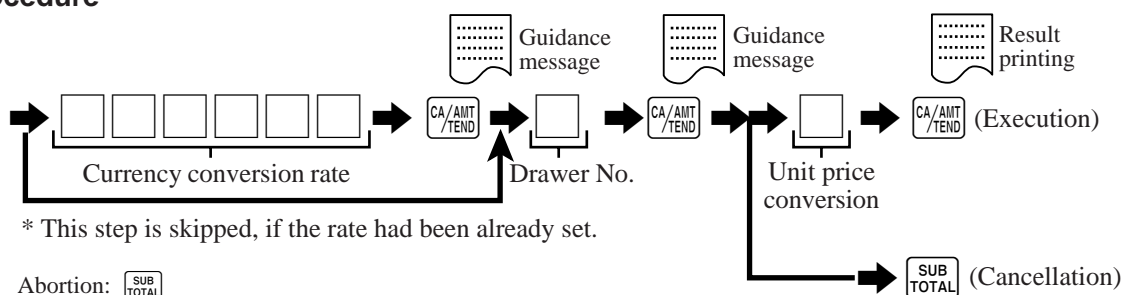

Type 1 procedure

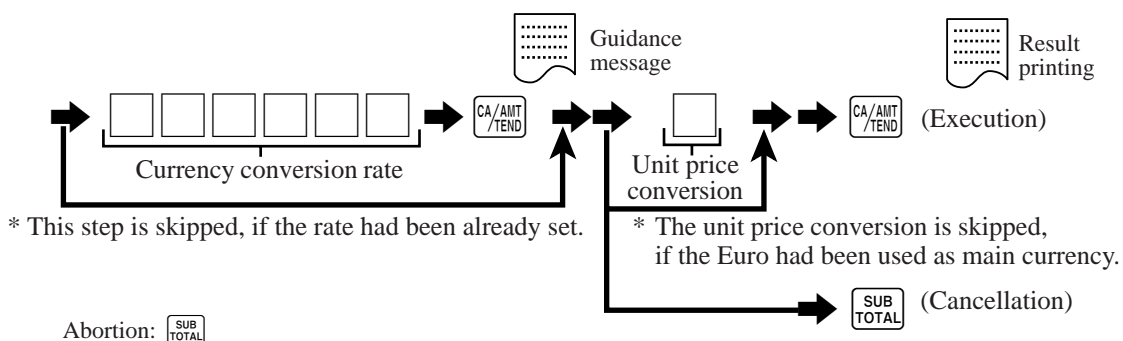

Type 2 procedure

### Type 3 procedure

### Type 4 procedure

### Data (Currency conversion rate)

Description	Choice	Program code
Currency exchange rate: (6 digit with decimal point key) example: 1 Euro = DM 1.95583	Significant numbers	<input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> D <sub>6</sub> D <sub>5</sub> D <sub>4</sub> D <sub>3</sub> D <sub>2</sub> D <sub>1</sub>

### Data (Drawer number for sub currency)

Description	Choice	Program code
Cash drawer number of sub currency: CE-6000/6100, TK-6000/6500, CE-T300: 0 ~ 2 CE-7000, TK-7000/7500, TK-T500: 0 ~ 4 ("0" means main drawer)	Significant number	<input type="text"/> D <sub>1</sub>

### Data (Unit price conversion to Euro)

Description	Choice	Program code
All unit price (department, PLU, flat-PLU, scanning PLU) are converted in Euro. Note: All unit price/rate of the following function keys (<CASH>, <CHECK>, <NB>, <+>, <->, <COUPON>) are set to zero.	Yes = 0 No = 1	<input type="text"/> D <sub>1</sub>

### Automatic execution of this procedure on the preset date/time

You can execute this Euro switchover procedure automatically by using arrangement and scheduler.  
Please refer to the programming example on page 190.

Programming for the Australian GST

This procedure is used for defining

- Tax symbol (\*) is printed.
  - Taxable amount (receipt) is skipped.
  - “GST INCLUDED” is set to the TX1 descriptor.
  - “TAXABLE AMT” is set to the TA1 descriptor.
  - Total line is printed even in direct (cash) sales.
  - Australian rounding is set.
  - “\$” is set to the monetary symbol.
  - Print “MOF message” on receipt.
  - Tax (10% tax rate, add-in tax, fraction rounding off) is set to the tax table 1. No data is set to other tax tables.
  - The taxable amount and tax amount except TA1/TX1 are not printed on fixed totalizer report.
  - “RND/ST” is set to the subtotal descriptor for display (only for CE-7000, TK-7000/7500, TK-T500).
  - After subtotal, both “rounded ST” and “not rounded ST” are displayed (only for CE-7000, TK-7000/7500, TK-T500).
- at the same time.

Procedure

Programming of items in the program 1 mode

Use the manager control mode to program the items in the program 1 mode. These items can be preset to prohibit programming by manager control mode. The following is a list of items that you can program using the manager control mode.

- Unit prices for departments, and PLUs
- Unit prices for the plus, minus, coupon keys
- Second unit price for PLU
- Percentage for discount/premium key
- Rate or amount service charge for check cashing using the check tender key
- Rate or amount service charge for temporary finalization using the new balance key
- Date
- Time
- Currency exchange rate for currency exchange key
- Rate tax
- Scanning PLU direct maintenance

To enter the program 1 mode

1. The register enters the program 1 mode at this point. You do not need to change the mode switch to the program position.
2. Perform program 1 programming as explained in the programming manual.

To exit the program 1 mode

Change the position of the mode control key to another setting (REG1/2, RF, OFF, Z1, X2/Z2 or PGM).  
This procedure cancels program 1 mode of manager control (X1) mode.

## Preparation for issuing report

### Money declaration

There are two ways to declare the money in drawer amount; money declaration in the REG1/REG2/RF mode or money declaration in the X1/Z1 mode. Both declarations release “money declaration compulsory.”

#### Money declaration in the REG1/REG2/RF modes

The register stores the declaration amount, declaration over and declaration short totalizers for each payment medium, and you can issue reports in the status of each totalizer.

- Declaration amount: Stores declared amount (added in the REG1/2, subtracted in RF).
- Declaration over: Stores difference between declared amount and in drawer amount if declared amount is greater than the in drawer amount.
- Declaration short: Stores difference between declared amount and in drawer amount if declared amount is less than the in drawer amount.

#### Money declaration in the X1/Z1 modes

### Password (X2/Z2 mode)

Without entering password of X2/Z2 mode, an error will occur if it is programmed.

Press the clerk number key if you want the password you input not to appear on the display.

## Issuing read/reset report

- The formats of read reports are similar to those of reset reports, except that the reset reports contain the symbol “Z” and the non-resettable number of resets at the top. Also, the non-resettable grand total is printed on the fix total reset report.
- If money declaration is programmed as compulsory, you must input an amount before you can perform read or reset operations, otherwise an error will occur.
- “\*” is printed on the left side of the “X or Z” symbol on the read or reset report if an overflow occurs in any of the counters or totalizers.
- A report header message (report title) that indicates the report code and report contents is printed in the header line of each report. The report header message is programmable up to maximum of 12 characters. Note that the report header is programmable for each totalizer file or for batch X/Z report file record, not for each report code.

# Read/reset report

## Programmability

Report issuance can be programmed with the following features:

- Suppress printing of zero total lines.
- Money declaration compulsory
- Report header message (report title)
- Print sales ratio
- Suppress printing of grand total
- Print two copies of the fixed total reset report.
- Print PLU number/random PLU codes on the PLU report and individual report.
- Clear (reset) actual stock quantity when the stock reset report programmed in a batch report is issued.
- Printing control for totalizers and counters in the fixed total report
- Start time period for the hourly sales and hourly item report
- Target items for the hourly item report
- Print the monthly sales average amount on the monthly sales report.

## Issuing procedure

The following procedures are available for issuing reports:

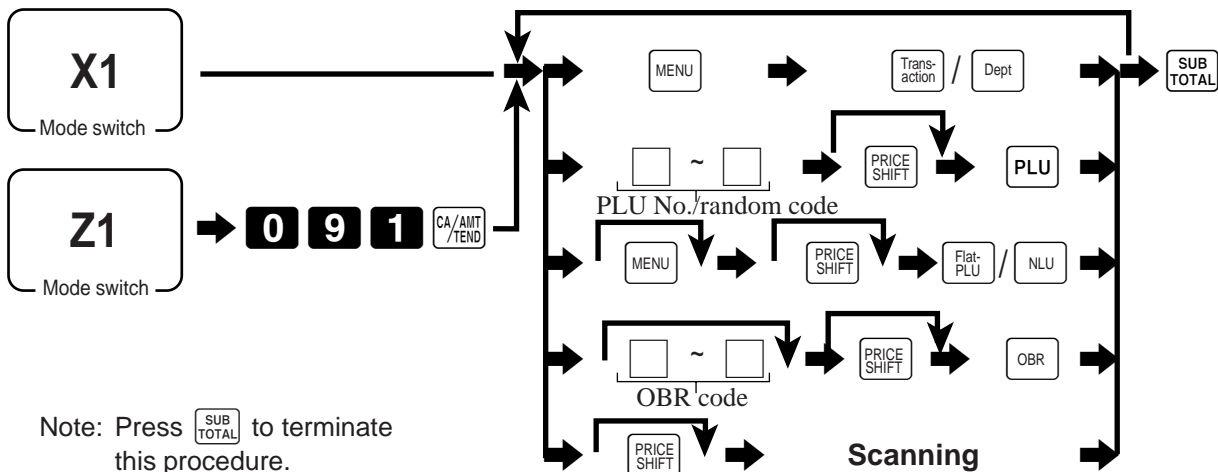

- Individual read/reset report issuance.
- PLU/scanning PLU range read/reset report issuance
- Report code input for individual files for read/reset report issuance
- Batch read/reset report issuance for string report
- File reset (clear totalizers/counters) with no report

# Consolidation

## X/Z consolidation

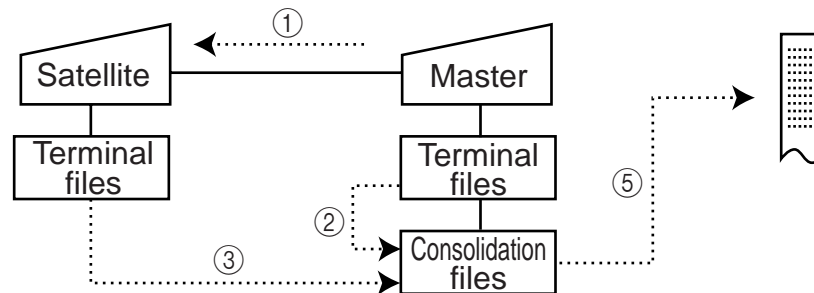

This is used when it is desirable to obtain the counters and totals of all terminals in the store.

After consolidating data from all specified terminals, the master prints the details on the receipt/journal printer.

First of all, allocate the appropriate consolidation files and program the terminal connection table.

During the X consolidation, the satellite terminals send data and do not print out the reports. But, during the Z consolidation, satellites are locked from registrations, and reports can be printed out on the receipt/journal of a terminal in accordance with the program. Also, you can program the behavior of the master, when the satellite does not respond for the first polling (refer to the address 13 of the general function program).

## X consolidation processing

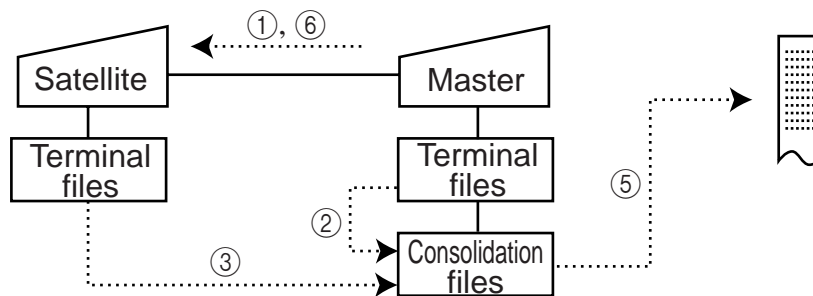

X consolidation processing is performed as the figure shown below.

- ① An X consolidation command is started up from the master terminal.
- ② Data of the master's terminal file are copied to the consolidation file, if the master is included in the target terminal.
- ③ Data of the satellite's terminal file are sent to the master terminal, and are added to the consolidation file.
- ④ The same process described in step 3 is executed for other terminal.
- ⑤ After the above consolidation processing is completed for all target terminals, the data are reported on the master's R/J printer.

## Z consolidation processing (except for scanning PLU)

Z consolidation processing is performed as the figure shown below.

- ① A Z consolidation command is started up from the master terminal.

The master first locks objected terminals.

- ② Data of the master's terminal files are copied to the consolidation file.

- ③ Data of the satellite's terminal files are sent to the master terminal, and are added to the consolidation file.

- ④ The same process described in step 3 is executed for other terminal.

- ⑤ The data accumulated in the consolidation file are reported on the master's R/J printer.

If reporting on the satellite is programmed, the reports are printed out on the satellite R/J printer in accordance with the program. The files of the master terminal are cleared, if the master is included in the target terminal. The files of the satellite terminal are cleared.

- ⑥ After the above consolidation processing completes for all target terminals, the stock data in the consolidation file is copied to the terminal file of the master and then satellite's Z lock statuses are released.

## Z consolidation processing (for scanning PLU)

Scanning PLU has Z consolidation only, because there is no consolidation file for scanning PLU.

Z consolidation for scanning PLU processing is performed as the figure shown below.

(Only "consolidate all terminals" is possible.)

- ① A Z consolidation command is started up from the master terminal.

The master first locks objected terminals. No report is printed out on the satellite R/J printer.

- ② Data of the satellite's terminal files are sent to the master terminal, and are added to the terminal file. The sent part of the satellite terminal's file are cleared.

- ③ The same process described in step 2 is executed for other terminal.

- ④ The data accumulated in the consolidation file are reported on the master's R/J printer in accordance with the program.

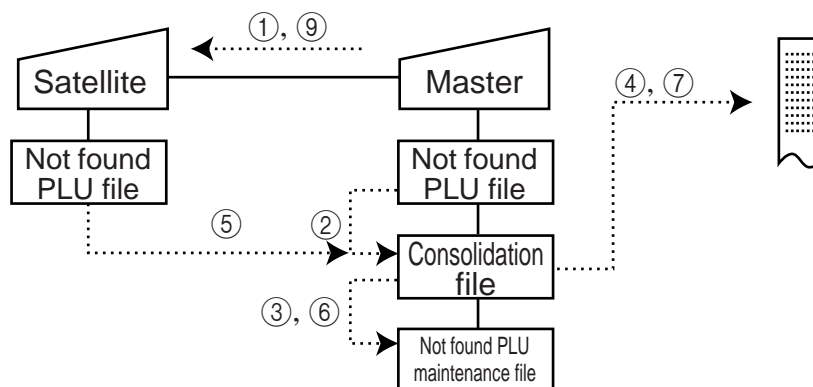

- ⑤ After the above consolidation processing completes for all target terminals, satellite's Z lock statuses are released.

## Scanning PLU maintenance by consolidating the not found PLU file

During registrations, the item that has not existed in the PLU or not found PLU file is stored in the not found PLU file when the item is registered. So, after business hours, you should merge the items in the not found PLU file to the PLU (main) file. To merge the contents of the not found PLU file to the main file, consolidation of the not found PLU is necessary, even if you have only one scanning terminal.

Consolidation for not found PLU processing is performed as the figure shown below.

(Only “consolidate all terminals” is possible.)

- ① A consolidation command is started up from the master terminal.

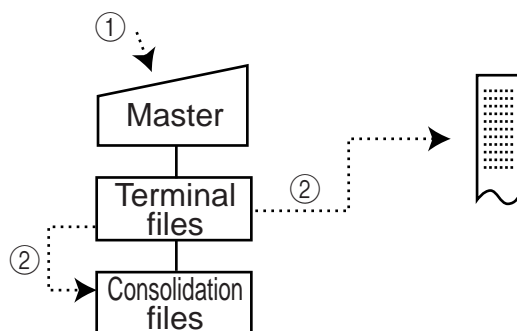

The master first locks objected terminals. No report is printed out on the satellite R/J printer.

- ② Data of the master's not found PLU file is copied to the consolidation file.  
 ③ Data of the consolidation file is merged in the not found PLU maintenance file. (If the same item exists in the maintenance file, the merger of this item is skipped.)  
 ④ Issue not found PLU report, and reset the not found PLU file if Z consolidation is performed.  
 ⑤ Data of the satellite's not found PLU file is copied to the master's consolidation file.  
 ⑥ Data of the consolidation file is merged in the not found PLU maintenance file. (If the same item exists in the maintenance file, the merger of this item is skipped.)  
 ⑦ Issue not found PLU report, and reset the not found PLU file if Z consolidation is performed.  
 ⑧ The same process described in steps 5 ~ 7 is executed for other terminal.  
 ⑨ After the above consolidation processing completes for all target terminals, satellite's Z lock statuses are released.

To merge the items in the not found PLU file, perform the “Not found PLU maintenance” (refer to the “Scanning PLU section.”)

## Standalone Z consolidation processing (except for scanning PLU)

In case of your store has one terminal per one store and every terminal are connected via online, you can consolidate the daily total not by executing consolidation but issuing report. (A program is necessary to use this option. Refer to the address code 13 of the general function program.) Standalone Z consolidation processing is performed as the figure shown below.

- ① A Z report issuance command is executed.  
 ② Data of the terminal files are added to the consolidation file, and the Z report of the files are issued.  
 ③ The files of the terminal are cleared.

# Application systems

## Scanning PLU (CE-7000, TK-7000/7500, TK-T500 only)

You can register items by scanning.

### System configuration of the scanning PLU system

- Maximum 4 terminals
- Each terminal has its own scanning PLU files.
- Scanning PLU files (such as scanning PLU file, batch maintenance PLU file, not found PLU file, not found PLU maintenance file and PLU direct maintenance file) are necessary to all terminals connected in the same inline (cluster).

#### Setup

1. After connecting a barcode scanner, program I/O parameter table to fit the scanner.
2. Allocate scanning PLU function keys (such as <OBR>, <One touch NLU>, <PRICE CHANGE>, and <PRICE INQUIRY> ). If you use multi price, allocate <PRICE SHIFT> too.
3. Allocate scanning PLU files and non-PLU table file.
4. Program the non-PLU table to suit your scanning system.
5. Broadcast the programs above to all of the terminals of the cluster and flag clear all terminals.
6. Program batch maintenance PLU file to add items and broadcast it to all of the terminals.
7. Activate the batch maintenance PLU file.

### Barcode system

Scanning PLU code		Input method		
		Scanner	OBR code <OBR>	One touch NLU
PLU type	EAN-13 (JAN-13)	✓	13 digits with check digit	✓
	EAN-8 (JAN-8)	✓	8 digits with check digit	✓
	UPC-A	✓	11 digits without check digit	✓
	UPC-E	✓	6 digits without check digit	✓
Non PLU type	EAN-13 (JAN-13)	✓	13 digits with check digit	✓
	EAN-8 (JAN-8)	✓	8 digits with check digit	✓
	UPC-A	✓	11 digits without check digit	✓

## PLU maintenance

There are three ways to maintain scanning PLU, i.e. not found PLU maintenance, batch PLU maintenance and direct PLU maintenance.

### Not found PLU maintenance

When an item which code is not existed in the scanning PLU file is registered, the “Not found” error occurs. You can register this item by not found PLU maintenance procedure. After this maintenance, this item is registered without the “Not found” error.

This item is stored in the not found PLU file, so you can check which item is registered and how many item is sold to read this file. Also, you can merge the contents of the not found PLU file to the scanning PLU file by the not found PLU maintenance.

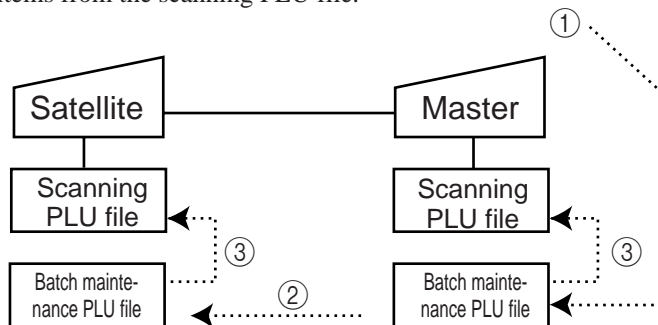

- ① Consolidate not found PLU file of all terminal to the master. (After this operation, not found items of all terminal are collected to the not found PLU maintenance file of the master.)
- ② Issue report of the not found PLU maintenance file.
- ③ Edit the not found PLU maintenance file.
- ④ Broadcast the not found PLU maintenance file to all terminal of the cluster manually.
- ⑤ Activate the not found PLU maintenance file from the master terminal. (After this operation, not found items are merged to the scanning PLU file.)
- ⑥ Reset the not found PLU maintenance file.

Note:

1. Only addition to the scanning PLU file can be made by the not found PLU maintenance.
2. In case of using stand-alone (master only) system, you can skip the step ④.
3. Even in stand-alone system, terminal connection table program is necessary.

### Batch maintenance

Batch maintenance is used for adding items to the scanning PLU file, changing the scanning PLU item programming data or deleting items from the scanning PLU file.

- ① Program the batch maintenance PLU file.
- ② Broadcast the batch maintenance PLU file to all terminals of the cluster manually.
- ③ Activate the batch maintenance file.

Note:

1. In case of using stand-alone (master only) system, you can skip the step ②.
2. Even in stand-alone (master only) system, terminal connection table program is necessary.

## Direct maintenance

Direct maintenance is used for adding items to the scanning PLU file, or changing the scanning PLU item programming data.

- ① Program the direct maintenance PLU file.

Note: After direct maintenance, broadcast the scanning PLU file to all terminals of the cluster.

## Mix & match discount

There are three types of mix & match processing:

- Discount 1 (discount every required quantity)
- Discount 2 (discount one time per one transaction)
- Discount 3 (discount continuously)

Mix & match discount affects to the item totalizer, link dept/subdept totalizer and link dept/subdept discount totalizer, when the “Net totaling” option is selected.

### Discount type 1:

In this type of processing, a discount is made when the quantity of a particular scanning PLU reaches a certain number during registration.

For example, assume that when three units of a particular scanning PLU, \$0.34 a piece, are sold at \$1.00. In this case, a discount is made automatically when the third unit of that scanning PLU is registered.

## Printing on the external printers

You can print receipts/reports/orders on external printer(s). Maximum 2 external printers can be connected to one terminal, so it is possible to print out to another printer (i.e. another external or internal R/J) for backup.

Note: The printouts from other terminal which is connected in the same inline cannot be printed on the external printer of that terminal.

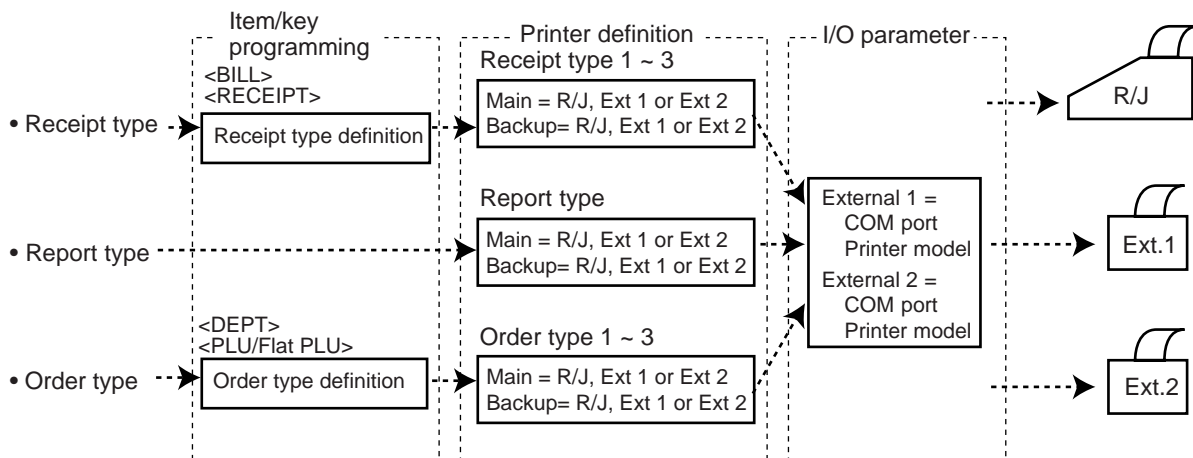

The printouts from R/J printer and external printer can be divided into 3 types; 1. Receipt type, 2. Report type, and 3. Order type.

For receipt type, <RECEIPT> and <BILL> have the option (Receipt 1, Receipt 2, Receipt 3) of the target printer; R/J, external 1 or external 2.

For report type, you can define one target printer; R/J, external 1 or external 2 for report printer. For order type, each item has its own option (Order1, Order 2, Order 3) of the target printer; R/J, external 1 or external 2.

## System configuration of the external printer system

- Maximum 2 printers/1 terminal (Refer to the system configuration chapter.)
- External printer buffer (file 049) should be allocated. (Refer to the program 5 chapter.)

### Setup

1. Program the target printer (Order1, Order 2, Order 3) to each item by address 16 of the item individual feature programming.
2. Program the target printer (Receipt 1, Receipt 2, Receipt 3) to <BILL> or <RECEIPT>. If you want to print out these receipt to an external printer, select "Buffered print" of the address 05 of the general function program.
3. Program the main printout destination and backup destination to the printer connection table.
4. Program the I/O parameter table to define the peripheral devices including external printer(s).

Note: FC operation is necessary, if you change the I/O parameter table.

## Backup system

If the main destination printer is out of order (such as power failure, or paper out), the terminal sends this data to the backup destination printer automatically.

### Note:

1. The destination of normal registrations is "Receipt 1" (fixed).  
"Buffered print" of the address 05 of the general function is necessary.
2. The destination of post receipts/guest receipts is programmable.  
"Buffered print" of the address 05 of the general function is NOT necessary.
3. The destination of bill copy is programmable.  
"Buffered print" of the address 05 of the general function is necessary.
4. You cannot back up the printouts to the R/J printer to external printers.  
That is, R/J printer is the last backup printer.

## Printing control options for order

Below shows the summary of the programmable options for order printing.

Programmable oprion	for R/J	for External printer	Program location
Number of feed lines before order printing (1 ~ 9)		✓	Address code 19 of the general control program
Number of feed lines after order printing (1 ~ 9)		✓	Address code 19 of the general control program

Print order with amount.	✓	✓	Address code 19 of the general control program
Print order with order character.	✓	✓	Address code 19 of the general control program
Print order even if training clerk is registered items.	✓	✓	Address code 19 of the general control program
Printing color of order		✓	Address code 16 of item program
Definition of order 1 ~ 3	✓	✓	Address code 16 of item program
Definition of order character	✓	✓	Address code 16 of item program

## Tips

### Future order

This is an enhancement of the training function.

By using the original training specification, the training clerk cannot accept any customer. Because no journal printing and no memory affection of this function is made.

By using “Future order”, you can get this sales data and journal printing even if the transaction is registered by the training clerk.

### Usage

Receipt issuance: **OFF**

1. Start training. (Sign on a training clerk.)

#### During training

2. Register items and finalize this transaction.

#### In case of accepting a customer

3. Register items and finalize this transaction.

4. Issue receipt or slip. (Press <GUEST RECEIPT> or <SLIP PRINT>.)

Journal printing and memory affection is made at this point.

:

5. End training. (Sign off the clerk.)

### Preparation

1. Allocate <GUEST RECEIPT> or <SLIP PRINT>. (See program 4.)

2. Set training flag to the training clerk. (See clerk program in the program 3 mode.)

3. Set the option “print journal when the key is pressed” to the key <GUEST RECEIPT>, <SLIP PRINT>.

4. Set to affect training registrations to the periodic 1 (or 2) total, all registrations (both normal and training) to the periodic 2 (or 1) by the address code 16 of the general control program in the program 3 mode.

5. Set space to the training filler and future order message in the special character table in the program 2 mode.

### Eat-in/takeout

This function is used for specifying if the customer eat in the restaurant or takeout. When the <EAT-IN> or <TAKEOUT> is pressed before finalize operation, the “Eat-in/takeout” compulsion is released and the tax exemption is applied.

After pressing <EAT-IN> or <TAKEOUT>, only finalize operation is possible.

The compulsion is released by <OPEN2>, so be sure to allocate this key before using this function.

## Automatic execution of Euro switchover by arrangement and scheduler

The following sample shows an automatic execution program of arrangement and scheduler.

### Sample program

Execution date/time: 31. December 2001 23:59  
 Currency definition type: 3 (Main currency = Euro, Sub currency = Local, Change = Euro)  
 Currency conversion rate: 1 Euro = 6.55957 F Franc  
 Drawer of sub currency: Main  
 Unit price conversion: Yes

#### • Arrangement

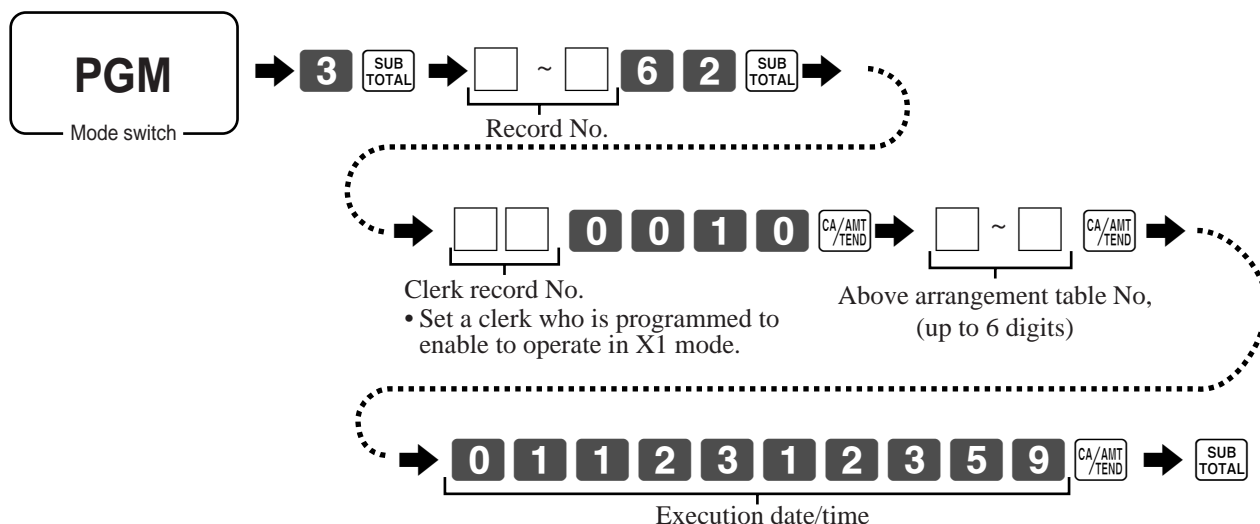

\*1 The same [ARR] should be pressed.

\*2 Vacant record search: If you want to set an arrangement program to a new record, “vacant record search” is possible. (enter **0 0 0 0** instead of entering a record No.)

\*3 A clerk who is programmed to enable to operate in X1 mode must be signed on.

\*4 If necessary, sign on the original clerk who is programmed to disable to operate in X1 mode.

#### • Scheduler

## Appendix (Calculation method)

- All formulas in these explanations are calculated in the registration mode.
- In the RF mode, the values in totalizers are calculated using the opposite sign.
- In the REG- mode, the value in totalizers and counters are calculated using the opposite sign.

### Select these options:

- Interface selection:  
SNI RS-232C interface selection

- Baud rate:  
Baud rate = 9600 bps

- Data format settings:  
Parity = Odd  
Stop bits = One  
Data bits = Eight bits

- Software control:  
Hardware control = Enable CTS/RTS flow control  
Software control = Disable Xon/Xoff

- RS-232C ACK/NAK options:  
ACK/NAK enable = Disable ACK/NAK

- Setting symbology specific label identifiers:  
Transmit label I.D. as prefix

### “SNI RS232C” default value:

- General features:  
Audible signal = Enable  
Power-up beeping = Enable  
Beeper volume = Low  
Beeper duration = 100ms  
When to beep = Beep/LED after decode  
Low power mode = Disable  
Debug mode = Disable  
Auto sense stand mode = Disable

- RS-232 I/F settings:

RS-232 I/F = N/A  
SNI RS-232 I/F = Enable  
Baud rate = 9600  
Parity = Odd  
Stop bit = 1  
Data bit = 8  
Hardware control = Use CTS/RTS flow control  
Software control = Disable = Xon/Xoff  
Intercharacter delay = 0  
Keyboard wedge I/F settings:  
KBD wedge I/F type = N/A  
External keyboard/No keyboard = N/A  
Send control characters = N/A  
Intercharacter delay = N/A

- Label transmit format config items:

Prefix = Disable  
Suffix = Global D00  
Label I.D. control = Transmit as prefix  
UPC-A label I.D. = 4100

- Symbology:

UPC/EAN = Enable

- UPC/EAN options:

UPC-A to EAN-13 expansion = Expand  
UPC-E to UPC-A expansion = Don't expand  
EAN-8 to EAN-13 expansion = Don't expand  
UPC-E to EAN-13 expansion = Don't expand

## NCI 6710

Follow the setup steps described in the user's manual of the scale to set the configuration.

We recommend the baud rate as 4800bps, even parity (the scale displays “48e”), and protocol as Cash register compatible (the scale displays “ECR”).
